PROFESSIONAL SUMMARY

AI Engineer with a Software Engineering foundation and experience in backend, APIs and production. I build RAG, agents and Machine Learning with reliable evaluation, human review and a product perspective.

PROFESSIONAL EXPERIENCE

Agência Catus | AI Engineer | Oct 2026 - Present

- Research AI for process automation, development efficiency and product delivery.
- Agentic development of stores integrated with e-commerce platforms, with testing, validation and documentation for safe and agile delivery.
- Agency and client WordPress sites: themes, features and deployment, using agentic development, best practices and research into AI-assisted methods.

Agência Catus | Full Stack Developer | Jun 2026 - Sep 2026

- Developed and maintained e-commerce platforms and WordPress sites.

EVAG | Software & AI Engineer | Oct 2026 - Present

- Research, analyze and develop AI-powered automation to optimize processes and support operations.
- Agentic development and system maintenance, following software best practices, testing and security.

EVAG | Developer | Apr 2024 - Sep 2026

- Automated petition pages via Google Drive/WordPress and request management via GitLab; systems with Laravel, Python, JavaScript, WordPress and Tailwind, including features and production fixes.

EVAG | Product Owner | Apr 2023 - Mar 2024

- Managed website delivery from discovery to deployment across clients, design and development; requirements, briefs, workflows and prioritization across business, UX and technical capacity.

TECHNICAL SKILLS

AI Engineering: Python, FastAPI, scikit-learn, pandas, Machine Learning, RAG, pgvector, LangGraph, OpenAI, agents, evals, guardrails and human review; experimentation with PyTorch/CUDA.

Software Engineering: TypeScript, Bun, Node.js, REST APIs, PostgreSQL, Redis, Git, Clean Architecture, DDD principles, TDD, unit/integration/E2E tests, idempotency and resilience.

Production, security & reliability: OpenTelemetry, authentication, authorization, performance, Docker, Terraform, CI/CD and a temporary non-production AWS lab.

Product perspective: Problems, requirements, trade-offs, outcomes and deciding when to use AI.

SELECTED PUBLIC PROJECTS

OpsPilot AI: Python/FastAPI, RAG and LangGraph/OpenAI agents with human approval, GitLab reconciliation, evals and OpenTelemetry. Independent OpenAI and GitLab sandbox smokes; no AWS deployment.

Ops Triage AI: Triage with a deterministic baseline, local LLM and human review. Jev/Laya evaluation and PyTorch/CUDA adaptation outside runtime; frozen synthetic held-out of 70 tickets, with documented regressions.

DefectRisk: Python/scikit-learn, risk ranking for human review. Historical test: the top ~30% of modules included 300/421 defective modules (71.26% recall). Leakage-safe evaluation and reproducible CLI; the later artifact needs external validation.

Resilient Transaction API: TypeScript/Bun, PostgreSQL, Redis, idempotency, retries and circuit breaker. Terraform and a temporary non-production AWS lab with functional validation, destroy and audit.

Salus: Node.js/Express, PostgreSQL/Prisma, Clean Architecture, domain modeling and a manual TDD core; JWT, ownership-based authorization and tests.

EDUCATION

Postgraduate Program in AI Engineering — Cruzeiro do Sul

In progress · expected completion: Apr 2027

Systems Analysis and Development — UniBF

Completed in 2026

Software Engineering — Alura

Back-end · Node.js APIs · Authentication · Testing · Security · DevOps/CI/CD · Cloud/AWS · Secure Development

LANGUAGES

Portuguese — native · English — advanced
